

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application:

1. (currently amended) A cross dichroic prism for color decomposition, the cross dichroic prism being mounted with a reflection type liquid crystal projector for making a luminous flux from a light source obliquely incident on a reflection type liquid crystal display device, the cross dichroic prism transmitting a green color light component therethrough and reflecting blue and red color light components into directions different from each other upstream of the reflection type liquid crystal display device;

the cross dichroic prism comprising a blue-reflecting dichroic film for reflecting the blue light component and a red-reflecting dichroic film for reflecting the red light component, each of the blue- and red-reflecting dichroic films comprising lower and higher refractive index materials alternately laminated on a prism base;

the cross dichroic prism satisfying the following conditional expressions (1) or (2):

$$1.105 \leq N_h/N_l \leq 1.450 \text{ if } N_g \leq N_l \quad (1), \text{ or}$$

$$1.118 \leq N_h/N_l \leq 1.150 \text{ if } N_g > N_l \quad (2)$$

where  $N_g$  is the refractive index of the prism base,  $N_h$  is the

refractive index of the higher refractive index material, and  $N_1$  is the refractive index of the lower refractive index material;  
**and**

wherein the luminous flux from the light source is incident on an entrance surface of the cross dichroic prism at an angle making the luminous flux oblique to the entrance surface when viewed from a side and perpendicular to the entrance surface when viewed from a top side of the cross dichroic prism;

wherein a top side is defined as a view when viewed from a top surface in which two dichroic surfaces are shown as crossed,  
and

wherein a side is defined as a view when viewed from each of two surfaces perpendicular to the entrance surface among four side surfaces.

2. (original) A cross dichroic prism according to claim 1, wherein the cross dichroic prism satisfies the conditional expression (1); wherein the higher refractive index material is a material selected from the group consisting of  $Nb_2O_5$ ,  $TiO_2$ ,  $Ta_2O_5$ ,  $LaTiO_3$ ,  $HfO_2$ ,  $ZrO_2$ , and  $La_{2x}Al_{2y}O_{3(x+y)}$ ; and wherein the lower refractive index material is a material selected from the group consisting of  $LaTiO_3$ ,  $HfO_2$ ,  $ZrO_2$ ,  $La_{2x}Al_{2y}O_{3(x+y)}$ ,  $Y_2O_3$ ,  $PrAlO_3$ , and  $Al_2O_3$ .

3. (original) A cross dichroic prism according to claim 2, wherein the prism base is a glass material made of BK7.

4. (original) A cross dichroic prism according to claim 1, wherein the cross dichroic prism satisfies the conditional expression (2); wherein the higher refractive index material is  $\text{Al}_2\text{O}_3$ ; and wherein the lower refractive index material is  $\text{SiO}_2$ .

5. (original) A cross dichroic prism according to claim 4, wherein the prism base is a glass material made of BK7.

6. (original) A cross dichroic prism according to claim 1, wherein the blue-reflecting dichroic film is constituted by 23 to 29 layers; and wherein the red-reflecting dichroic film is constituted by 19 to 25 layers.

7. (original) A cross dichroic prism according to claim 1, wherein, in the blue- and red-reflecting dichroic films, at least one of lowermost and uppermost layers is a layer made of the lower refractive index material.

8. (original) A cross dichroic prism according to claim 7, wherein at least one of the blue- and red-reflecting dichroic films is constituted by an odd number of layers.

9. (previously presented) A reflection type liquid crystal projector comprising the cross dichroic prism according to claim 1, wherein the luminous flux from the light source is incident on an entrance surface of the cross dichroic prism at an angle making the luminous flux oblique to the entrance surface when viewed from a side and perpendicular to the entrance surface when viewed from a top side of the cross dichroic prism.
